

# Machine Operators - Inspection Checklist

---

## Daily Checks

- Clean the face of the Sensor. ☐
- Check for damages (Cracks in plastic, etc). ☐
- Test the sensors before heading out. Using a spotter, position an object behind the vehicle. The driver will place the truck in reverse. When the truck is positioned in reverse have the spotter ensure that the sensors are lighting up while detecting the object. The driver needs to make sure the green warning light on the control box in cab illuminated when the object was detected by the sensors. ☐
